

A full range of services to meet the highest expectations at the lower price possible

Node-as-a-Service / Validation-as-a-Service

We setup, deploy and maintain your nodes. Effortless for our customers.

- Full web3 Permissionless Avalanche Mainnet VaaS (Subnets soon)
- Custom VaaS (Mainnet + Subnets, custom server locations)
- Custom RPC Access
- Archival Nodes

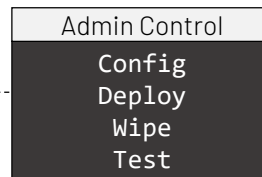

Custom Devnet

Access a turnkey blockchain infrastructure to develop your web3 projects:

- Custom Blockchain (Avalanche)
- Faucet
- Block Explorer
- Auth Management
- Public Devnet (open testnet)

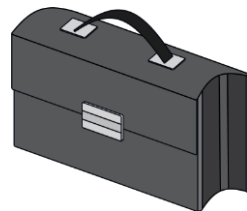

API Calls
Custom Web Interface

Blockchain Consultancy

We offer our technical and social skills to support all your projects:

- Solidity Contracts (Design, Deployment / Update)
- Web3 Web Interfaces
- Front-2-back Audit
- Business Plan

Enterprise Information System (Bring-Your-Own-Cloud or on premises)

We help you set up a secure, standards-compliant corporate network over which you retain complete control.

A time-consuming process, that needs to be carried out at the worst possible time, i.e. when your company is set up. But essential for the security and durability of your company. We can take action at any time to manage it, allowing you to focus solely on your company's core business.

- Email
- SSO
- IDM
- Enterprise Version Control (to keep it private if non-open source code)
Ex: private Gitlab for private repositories
Ex: public Gitlab for public repositories
- Secret management
- Network and VPN
- Internal Messaging Service like Mattermost

We can help you build all your Information System management rules (ie: charters, rules, implementation guidelines, etc.)
